

Providence Gateway – TV & Internet Service Options

Owners have several options for TV and Internet service at Providence Gateway. All options listed below allow for both TV and Internet access.

Available Providers

Xfinity & CenturyLink

- Both were directly wired to each unit during original construction by Visionary Homes.
- All wiring is located in the mechanical box inside each unit.
- Wi-Fiber may also be run across existing CenturyLink wiring.

Providence Fiber

- Originally installed only in Condo Buildings C & D, Providence Fiber has now been extended to all 202 units (Condos & Townhomes).
- A small fiber box is already mounted on the exterior of each building (below the front windows and corners of all Condo buildings, except C & D).
- To complete installation:
 1. Providence Fiber will drill a ¼" hole to mount a box inside the unit.
 2. The owner must connect the fiber box to an existing network outlet, which activates the connection in the mechanical box (washer/dryer room).
 3. Once active, service can be distributed to all network outlets in the unit.
- This installation process was approved by Visionary Homes and FCS prior to our management.
- The HOA has granted Providence Fiber permission to drill the ¼" hole in each unit.

Additional Providers for ISP Connections (through Providence City Fiber Network) - See

www.providence.stratafi.net for setting up service.

- Strata Networks
- Senawave
- Sumo
- InfoWest
- Beehive Broadband
- Intellipop
- Advance Stream
- Wi-Fiber
